# Collecting like terms

2

**Quick quiz**

Tick each expression that can be simplified.

$$d + d$$

$$a + b$$

$$x^2 + x^2$$

$$x^2 + y^2$$

10

**Collecting like terms**

Grades 1–2

1. Simplify

(a)  $d + d + d$

[1 mark]

$$\color{blue}{\text{I}} = 3 \dots\dots\dots$$

.....

(b)  $t + 2t + t + t$

[1 mark]

$$\color{blue}{\text{I}} = \dots\dots\dots t$$

.....

(c)  $r + 2r + r + 3r$

[1 mark]

.....

2. Simplify

(a)  $2c + 3c + 4c$

[1 mark]

.....

(b)  $5e + e - 10e$

[1 mark]

.....

(c)  $7g - 4g - 8g$

[1 mark]

.....

If the variables are the same, you can add the coefficients.

3. Simplify

(a)  $3f + 4 - 2f + 6$

[2 marks]

.....

(b)  $3x + 8y + x - 2y$

[2 marks]

$$\color{blue}{\text{I}} = 3x + x + 8y - 2y$$

.....

(c)  $3x - 5y + x + 4y$

[2 marks]

.....

(d)  $5f + 7 - 6f - 4$

[2 marks]

.....

4. Jane simplifies  $3ef + 5ef - ef$  to get  $9ef$ . Explain why Jane is wrong. [2 marks]

Think how you would have simplified the expression and then what Jane might have done differently.

.....

5

**Collecting terms with powers**

Grade 2

5. Simplify

(a)  $m^2 + m^2 + m^2$

[1 mark]

There are three lots of  $m^2$ .

.....

(b)  $3a^2 + 2h + a^2 - 3h$

[1 mark]

**Exam focus**

Always give your answer in its simplest form.

.....

(c)  $5x^2 - 4y + 3x^2 - 3y$

[2 marks]

.....

(d)  $9p^2 + 2t - 2p^2 + 3t$

[2 marks]

.....

(e)  $3x^2 - 5y + x^2 + 4y$

[2 marks]

.....

(f)  $3x^2 + 7y^2 + 2x^2 - y^2$

[2 marks]

.....

Made a start

Feeling confident

Exam ready

## Simplifying expressions

## 2 Quick quiz

Fill in the gaps.

(a)  $a \times a = a \dots\dots\dots$

(b)  $ab = a \dots\dots\dots b$

(c)  $a \times c = a \dots\dots\dots$

(d)  $a^3 = a \times \dots\dots\dots$

## 15 Simplifying with single operations

Grade 1

1. Simplify

(a)  $5 \times e \times f$  [1 mark]

$$\rightarrow = 5 \times ef$$

.....

(b)  $7 \times 2t$  [1 mark]

$$\rightarrow = 7 \times 2 \times t$$

.....

(c)  $5 \times 3g$  [1 mark]

$$\rightarrow = \dots\dots\dots \times \dots\dots\dots \times g$$

.....

When multiplying, remember that letters in algebra are generally written next to each other in alphabetical order.

2. Simplify

(a)  $2m \times 3n$  [1 mark]

$$\rightarrow = 2 \times 3 \times m \times n$$

$$= \dots\dots\dots \times mn$$

.....

(b)  $2e \times 3f$  [1 mark]

(c)  $3 \times c \times c$  [1 mark]

$$\rightarrow = \dots\dots\dots \times c \dots\dots\dots$$

.....

Multiply the coefficients and multiply the letters.

Remember the index laws:  
 $c \times c = c^2$

3. Simplify

(a)  $24x \div 3$  [1 mark]

$$\rightarrow = \frac{24x}{3}$$

$$= 8 \dots\dots\dots$$

.....

(b)  $15a \div 5$  [1 mark]

(c)  $36y \div 12$  [1 mark]

.....

## Exam focus

Simplifying with division:

Step 1: Write the expression as a fraction.

Step 2: Cancel the numbers, then the letters.

Step 3: Use the index laws.

(d)  $48g^2 \div 4g$  [1 mark]

(e)  $10a^4 \div 5a^2$  [1 mark]

(f)  $42t^3 \div 7t^2$  [1 mark]

(g)  $25x^2 \div 5x^2$  [1 mark]

.....

.....

.....

.....

## 5 Mixed operations

Grade 2

4. Simplify

(a)  $\frac{25x^3y^2}{xy}$  [2 marks]

(b)  $\frac{24a^4b^3}{12ab}$  [2 marks]

$$\rightarrow = \frac{24 \times a^4 \times b^3}{12 \times a \times b}$$

$$= 2 \times a^3 \times \dots\dots\dots$$

$$= \dots\dots\dots$$

.....

.....

.....

.....

(e)  $\frac{84t^7v^5}{12v^5}$  [2 marks]

(f)  $\frac{15s^5t^4}{s^2t^3}$  [2 marks]

5. Ben simplifies  $\frac{14m^5n^8}{2m^3n^6}$  to get  $7m^8n^{14}$

Explain why Ben is wrong.

[2 marks]

.....

.....

.....

.....

# Writing expressions

**Quick quiz**

Given that  $x = 4$ ,  $y = 3$  and  $t = 5$ , find the value of

**(a)**  $10 \times x$

**(b)**  $5 + y$

**(c)**  $15 \div t$

.....

.....

.....

**Using information****Grade 3**

1. Bruno has  $x$  counters. Saira has three times as many counters as Bruno. Dylan has three more counters than Bruno.

Write an expression, in terms of  $x$ , for the total number of counters Bruno, Saira and Dylan have.

**[2 marks]**

**Number of counters:**

Bruno has  $x$  counters

Saira has 3..... counters

Dylan has  $x + \dots$  counters

So an expression for the total number of counters is

$$x + 3x + x + 3 = \dots$$

2. There are 6 pens in a box of pens. There are 9 pencils in a box of pencils.

Nita buys  $m$  boxes of pens and  $n$  boxes of pencils.

Write an expression for the total number of pens and pencils that Nita buys.

**[1 mark]**

.....

4. Rachel uses this rule to work out the cost in £ of hiring a car for  $n$  days:

Multiply the number of days by £45, then add £60

**(a)** Write an expression for the cost of hiring a car.

**[1 mark]**

$45 \times \text{number of days} + 60$

$$45 \dots + \dots$$

£.....

**(b)** Imran hired a car for 12 days. Using your expression, work out the cost that Imran has to pay. **[1 mark]**

**Input 12 as  $n$**

$$45 \times 12 + 60 = \dots$$

£.....

3. Sweets are sold in packets and in boxes. There are 8 sweets in a packet. There are 12 sweets in a box.

Frank buys  $x$  packets of sweets and  $y$  boxes of sweets.

Write an expression for the total number of sweets that Frank buys.

**[1 mark]**

.....

5. At the start of the week, the value in £ of a number of shares in a gas company can be worked out using this rule:

Multiply the number of shares by 3.5

**(a)** Write an expression for the value of  $n$  shares.

**[1 mark]**

£.....

**(b)** Use your expression to work out the value of 250 shares.

**[1 mark]**

£.....

By Thursday, the value of each share has dropped by 50p.

**(c)** Write an expression for the new value of the shares.

**[2 marks]**

**Value of each share** =  $(3.5 - 0.5)$

$$\text{Value of 250 shares} = 250 \times \dots$$

£.....

# Algebraic formulae

## 2 Quick quiz

Simplify each expression.

(a)  $x + 5 - x$

(b)  $3 \times x$

(c)  $2x + x + 6$

(d)  $x + 2 + x - 3$

.....

.....

.....

.....

## 5 Finding perimeter

Grade 3

1. The diagram shows a shape made from rectangles. All the measurements are in centimetres.

Find an expression, in terms of  $x$ , for the perimeter of the shape.

[3 marks]

Use the lengths you are given to work out the missing lengths.

Add all the lengths together.

List them in order, so you won't miss any.

**Perimeter** =  $x + (2x + 1) + (2x + 3) + 3x + (3x + 3) + (5x + 1)$

= ..... $x$  + .....

**Exam focus**

Give your answer in its simplest form.

.....cm

2. Simon sent  $x$  parcels on Monday.

On Tuesday, he sent twice as many parcels as on Monday. On Wednesday, he sent 6 fewer parcels than on Monday. It cost £8 to send each parcel. The total cost of sending all the parcels is £ $T$ .

Write down a formula for  $T$  in terms of  $x$ .

[3 marks]

.....

3. The diagram shows a trapezium.

$AD = x$  cm.  $BC$  is the same length as  $AD$ .

$AB$  is twice the length of  $AD$ .  $DC$  is 5 cm longer than  $AB$ .

The perimeter of the trapezium is  $P$  cm.

Find a formula for  $P$  in terms of  $x$ .

[3 marks]

**Problem solving**

Write the length of each side on the diagram in the order you read them.

$$AB = 2 \times x$$

$$DC = 5 + (2 \times x)$$

Then add them together to equal  $P$ .

.....

## 5 Deriving expressions

Grade 5

4. The diagram shows a shape made from rectangles.

All the measurements are in centimetres. All the corners are right angles.

The area of the shape is  $A$  cm<sup>2</sup>.

Find a formula for  $A$  in terms of  $x$ . Give your answer in its simplest form.

[4 marks]

To find the area you will need to know how to expand two brackets. Practise expanding brackets on page 26.

.....

# Copyrighted Material Algebraic indices

## Quick quiz

Simply each expression fully.

(a)  $a \times a \times a \times a$

(b)  $\frac{a \times a \times a \times a \times a \times a}{a \times a}$

(c)  $6 \times a \times 3 \times a \times b$

(d)  $3 \times a \times a \times b \times b \times b$

.....

## Applying laws of indices

Grades 4–5

1. Simplify these expressions.

(a)  $p^2 \times p^7$

[1 mark]

(b)  $x^8 \div x^3$

[1 mark]

(c)  $y^5 \times y^3$

[1 mark]

$= p^{2+7}$   
 $= p^{\square}$

$= x^{8-3}$   
 $= x^{\square}$

$= y^{\square} \div y^4$   
 $= y^{\square} = y^{\square}$

You can combine powers when the bases are the same. When you multiply, add the powers.

When you divide, subtract the powers.

2. Simplify these expressions.

(a)  $\frac{q^3 \times q^4 \times q}{q^2}$

[2 marks]

(b)  $(y^4)^3$

[2 marks]

(c)  $(3x^2)^3$

[2 marks]

When you raise a power to a power, multiply the powers.

In part (c) you need to raise a number **and** a power of x to a power.

(d)  $3x^2y \times 5xy^3$

[2 marks]

(e)  $\frac{20x^5y^3}{12xy}$

[2 marks]

## Finding indices

Grade 5

3.  $p^5 \times p^x = p^{12}$

Find the value of x.

[2 marks]

4.  $(5^3)^y = 5^{15}$

Find the value of y.

[2 marks]

5. Given that  $x = 5^p$  and  $y = 5^q$ , express the following in terms of x and y.

(a)  $5^{p+q}$

[1 mark]

(b)  $5^{3q}$

[1 mark]

(c)  $5^{2p+1}$

[1 mark]

**Problem solving**  
The bases in x and y are the same. For (a) find the index law in which you would add the indices together.

6. Write these numbers in order of size. Start with the lowest number.

[2 marks]

$2^{-1}$

0.2

-2

$2^0$

# Expanding brackets

## 2 Quick quiz

Simplify each expression.

(a)  $x \times 4$

(b)  $5 \times y$

(c)  $v \times v$

(d)  $a \times 4a$

.....

.....

.....

.....

## 10 Expanding brackets

Grades 2–3

1. Expand

(a)  $3(a + 5)$  [1 mark]

(b)  $5(b - 4)$  [1 mark]

(c)  $-4(c + 1)$  [1 mark]

Multiply the terms inside the bracket by the term outside the bracket.

$$\begin{aligned} \rightarrow &= 3 \times a + 3 \times 5 \\ &= 3 \dots + \dots \end{aligned}$$

.....

$$\begin{aligned} \rightarrow &= -4 \times \dots + -4 \times \dots \\ &= \dots \end{aligned}$$

.....

**Exam focus**

Write down your method step by step.

2. Expand these expressions.

(a)  $e(e + 2)$  [1 mark]

(b)  $2f(f - 3)$  [1 mark]

(c)  $-4g(g + 2)$  [1 mark]

(d)  $-3h(h - p)$  [1 mark]

$$\begin{aligned} \rightarrow &= 2f \times f + 2f \times -3 \\ &= \dots - \dots \end{aligned}$$

= ..... - .....

.....

.....

.....

## 10 Expanding brackets and simplifying expressions

Grade 4

3. Expand and simplify

(a)  $8a + 3(a - 2b)$  [2 marks]

(b)  $5(x + 7) + 3(x - 2)$  [2 marks]

$$\begin{aligned} \rightarrow &= 5 \times x + 5 \times 7 + 3 \times x + 3 \times -2 \\ &= 5x + \dots + 3x + \dots \\ &= \dots + \dots \end{aligned}$$

.....

(b) has two sets of brackets separated by an addition. Expand them separately and simplify by collecting like terms.

(c)  $5(y - 2) + 2(y - 3)$  [2 marks]

(d)  $3m(m + 4) - 2m(4m + 1)$  [2 marks]

(e)  $5x(2x + 1) - 3x(3x - 1)$  [2 marks]

.....

.....

.....

4. Taylor expands and simplifies  $3x(2x - 5) - 4x(x + 3)$ . Her working is shown here:

$$3x(2x - 5) - 4x(x + 3) = 6x^2 - 5 - 4x^2 - 7x = 2x^2 - 7x - 5$$

Identify two mistakes in Taylor's working.

[2 marks]

.....
